## Input Output Questions Solution

The correct answer is **Option 2** i.e. **Five**

Logic: In each step one word and one number are arranged.

For Words: All words are arranged in descending order on the bases of the number of vowels present in the word on the right end. If two words contain the same number of vowels then they are arranged in alphabetical order from left to right. When all words are arranged each vowel is coded with a specific code and placed this code in starting of that word. All the words are written in small letters from Step 1.

Code:

A- @

E- %

I- &

O- \*

U- #

For numbers: Numbers are arranged in ascending order on the left end but if a number is odd then add 2 to that number and if a number is even subtracted 2 from that number.
