

Science Questions Overview

Science Questions have a good weightage in the Ssc Chsl Exam and the type of question asked in Ssc Chsl exam is similar to the question mentioned below. It has been solved and explained by KD Live Experts under the guidance of Neetu Mam and they have tried to elaborate the concept used in Science Questions.

Question On Science

Which type of bones supports weight and facilitate movement?

Difficulty : Moderate

Average Time : 29 Seconds

Science Questions Options

1. Sesamoid Bones
2. Short Bones
3. Long Bones
4. Flat Bones

Science Questions Solution

The correct answer is **option 3** i.e. **Long Bones**.

- There are five types of bones in the skeleton:
 - **Flat Bones** protect internal organs. These are somewhat flattened and can provide protection, like a shield. Flat bones can also provide large areas of attachment for muscle
 - **Long bones function to support the weight of the body and facilitate movement.** These are mostly located in the appendicular skeleton and include bones in the lower limbs and bones in the upper limbs.
 - **Short bones** are about as long as they are wide. They are located in the wrist and ankle joints, short bones provide stability and some movement.
 - **Irregular bones** vary in shape and structure. They often have a fairly complex shape, which helps protect internal organs.

Sesamoid bones are bones embedded in tendons. These function to protect tendons from stress and wear.

Science Questions Tips and Tricks

1. Try to solve Science Questions without taking any help from the solutions.
2. Science Questions require proper usage of concept so firstly read the question thoroughly and then use the right concept.
3. In case you're not able to solve the question in less than 30 seconds in the exam then you should skip the question and move to the next question.
